TA lecture#1 Feedback

November 20th 2016, 10:44 am MST

Q1 - What were strengths of the lecture given by Sid on Friday?

What were strengths of the lecture given by Sid on Friday?

Sid did a great job of interacting with students and getting the material across in an efficient manner

Very well prepared. The class had a logical ordered and the problem was approached in an easy to follow format. Sid was prepared to handle most questions.

It was very clear and thought-out. He provided both opportunities to ask questions and good answers that make sense. He was engaging and informative. I effectively learned how to do the blasting problem.

Gets the whole class involved, answers all questions fully, makes sure everyone is following along and understanding

Detailed in explanation, worked slowly and understandably, willing to go even slower for those struggling to keep up, engaged the class in problem solving. Also explaining what certain obtained values mean in more detail was very helpful. Also, pausing to ask if everyone is good and following him okay was really good (even though I think sometimes students are stubborn and won't speak up if they are struggling, but that is entirely the fault of the student)

He went into depth explaining certain critical aspects of the operation. He explained them very well and made it really easy to understand. He was also funny during his lecture too which made the class engaging.

He made it very interactive, made jokes to make things funner.

He was well prepared, and was answering all the questions by confident. His tone of voice was clear and loud enough. He solved the problem step-by-step with explanation. The power point was easy to understand and it wasn't busy. He did a great job by asking questions and allowed the students to participate.

He did a great job getting people involved and answer questions. He noticed that only a few students were answering the questions and made sure to get the rest of the class participating as well.

The energy, always lively and ready to answer questions. Clearly well prepared

He was very thorough and was able to explain details and reasoning behind lecture topic

Sid could answer all questions he was asked and he was able to clearly walk us through all solution steps.

Q2 - What were the weaknesses of the lecture given by Sid on Friday?

What were the weakness of the lecture given by Sid on Friday?
He was a little hesitant at times, but that is totally expected for his experience level
Sid got tripped up on a few small details such as meaning of variables and there values. This is a very small criticsmall.
He made a mistake in the problem. Although it was corrected, it was a little confusing at the end of the lecture.
Moved a little fast
Perhaps writing numbers and values a little more legibly. And as much as I don't want to be the one called on, I think calling on students to solve through a step and putting them on the spot could be a good way to drive home concepts/problem solving methods.
The end of the lecture went a little fast due to time restraints, but it wasn't as rushed as some professors I have had in the past. I feel finishing one or two minutes early by explaining the information well is better than going slow and slamming some information right before class lets out.
Sometimes he would confuse himself and flip definitions. I could tell he was a little nervous but more practice will help
None
It was kinda difficult to follow what was happening on the board at times. It was not all written down linearly.
Sometimes couldn't have complete control and focus of class.
Class participation was low, he tried but most students just were not actively aprticipating
We kind of ran out of time by the end so the last few steps were rushed through.

Q3 - Provide some any additional feedback/recommendations.

Provide some any additional feedback/recommendations.

This was done really well and I am excited for more lessons taught by Sid

I think the class went very well

Sid, truly, great job! You will be a great professor some day!

Very good lecture I thought. It always makes a difference when the instructor is able to incorporate a little bit of humor in his/her lecture, it helps keep everyone involved. I also liked how Sid made going through the problem more a group effort and not just doing everything himself and expecting us to watch. Thanks Sid!

He was the best TA teaching a class that I have had so far in college. I wouldn't mind him teaching more classes in the future either.

I really recommend the department to hire him as an instructor. He did a great job.

He seemed super comfortable in front of the class which makes the lecture so much better!

Great lecture. Can't wait for the next one

He did a good job of explaining material and answering questions. I felt like I really understood the topic .

Q6 - Overall, how do you rate the lecture on a scale 0-10 where 0 is very poor and 10 is excellent?

#	Answer	%	Count
1	0	0.00%	0
2	1	0.00%	0
3	2	0.00%	0
4	3	0.00%	0
5	4	0.00%	0
6	5	0.00%	0
7	6	0.00%	0
8	7	7.69%	1
9	8	15.38%	2
10	9	38.46%	5
11	10	38.46%	5
	Total	100%	13
